

Final Thoughts

Don't always trust the speaker

'It is a safe rule to apply that, when a mathematical or philosophical author writes with a misty profundity, he is talking nonsense.' (Alfred North Whitehead.)

Conclusion

- 1 Complicated simulations are blind without conceptual theory.
- 2 Theory can be irrelevant without models and simulations.

Modern science needs both paths, but they don't always intersect as they should.

'When you follow two separate chains of thought, Watson, you will find some point of intersection that approximates the truth.' (Sherlock Holmes)

The most important thing: whatever you do, have fun doing it!
